SUMMARY

Full-stack developer, 5+ years, mostly React/TypeScript on the front end with .NET/C# or Node.js behind it. Spent three years on an Australian healthcare SaaS product, building role-based clinical messaging across 7 Azure-hosted client environments used by hospital and frontline teams. Currently the only engineer on three production applications (POS, B2B, Payroll), covering requirements through deployment and whatever comes up afterward. Comfortable working directly with non-technical users, and with the internal tooling and CI/CD work that keeps a small team moving.

TECHNICAL SKILLS

Frontend: React, TypeScript, JavaScript, SCSS, HTML/CSS, Bootstrap, Three.js, Flutter, Figma

Backend: .NET/C#, Node.js, Express, Entity Framework, PostgreSQL, SQL Server, Redis, BullMQ, REST APIs, SignalR

Cloud/DevOps: Azure, Azure App Service, Azure DevOps, CI/CD Pipelines, Vercel, Firebase

AI Tools: Claude Code, Codex

Other: Git, Jira, Postman, Firebase App Distribution, TestFlight

WORK EXPERIENCE

Freelance Full-Stack Developer
Independent | Metro Manila, PH *Jan 2026 - Present*

- Sole engineer on three production applications for a services business: a walk-in POS mobile app, a B2B client portal, and a payroll system.
- Nothing was documented when the work started, so requirements came out of sitting with cashiers, payroll staff, and the owners, turning spreadsheet habits into a specification and adjusting it as people began using the system. React/TypeScript front end, .NET/C# backend on Azure App Service, Entity Framework over PostgreSQL.
- Claude Code is part of the daily loop for development and code review.

Full-Stack Developer
Baret | Melbourne, AU (Remote from Manila) *Mar 2023 - Jan 2026*

- Delivered 175+ user stories and resolved 70+ production issues across 7 Azure-hosted multi-tenant client environments.
- Owned the role-based message routing rules, which decide the clocked-on users, roles, and teams that receive a given message, along with organization-wide broadcast. Built in .NET/C# and React over SignalR.
- Set up automated testing and CI/CD in Azure DevOps, wrote internal tooling that cut manual work for a 5-person team, and ran the large-scale data migrations.

Mobile Developer
Maliksi Creative Technologies Inc. | Makati, PH *May 2021 - Mar 2023*

- Shipped two student-facing education apps for the US market, GradGuru and MyCoach: 100+ user stories and 50+ bugs from implementation through release.
- Led the Flutter v1 to v2 migration, working through the breaking API changes with full feature parity.
- Handled releases for both apps through Firebase App Distribution and TestFlight, and tested cross-platform alongside QA.

SELECTED PROJECTS

PackPal - AI Travel Packing Assistant | packpal-scout.vercel.app

- "Scout" is a real-time chat assistant with tool calling: it adds, removes, and toggles packing items and assigns gear straight from the conversation.
- AI generation runs async on BullMQ workers with Redis pub/sub, streaming results and tool action events to the client over SSE.

Stack: React, TypeScript, Three.js, Node.js, Express, Redis, PostgreSQL

Integrated Business Management Suite (POS + B2B + Payroll)

- Flutter POS app plus a React admin dashboard covering revenue analytics, promotions, shift management, and XLSX/CSV/PDF reporting.
- Philippine-compliant gross-to-net payroll (SSS, PhilHealth, Pag-IBIG, BIR withholding, 13th month), and B2B onboarding-to-invoicing with per-client pricing.

Stack: React 19, TypeScript, SCSS, .NET/C#, Entity Framework, PostgreSQL, Flutter, Dart, Azure App Service

EDUCATION

BS in Information Systems | De La Salle-College of Saint Benilde Jan 2017 - Jul 2021
