EXPERIENCE

Fullstack Developer

FiveP/Baret Australia

March 2023 - January 2026

Melbourne, AU

- **Delivered 175+ user stories, 70+ bug fixes, and 20+ technical spikes** as a key contributor on an existing multi-tenant SaaS platform serving 7 client environments—working across backend (.NET/C#, Entity Framework, SQL Server) and frontend (React, TypeScript, SCSS).
- **Implemented real-time messaging and task features** using SignalR and React, ensuring live state synchronisation across dashboards for senders, recipients, supervisors, and monitors across all 7 Azure-hosted client environments.
- **Contributed across a wide range of complex full-stack feature domains**, including inter-organisation messaging, configurable respond/broadcast message types, swipe gesture interactions (React Native), role-based filtering, escalation rules, and a caseload shift management system.
- **Extended the multi-organisation communication system** by implementing cross-org role messaging, role group scoping, and externally contactable roles—working across the data model, API layer (.NET), and React UI.
- **Diagnosed and resolved 70+ production bugs** spanning dashboard crashes under high role load, real-time update failures, incorrect action visibility, SQL data integrity issues, and edge cases unique to multi-tenant Azure environments.
- **Contributed to the team's automated testing infrastructure**, helping establish API and unit test frameworks, test data creation scripts, a dedicated test environment, and a CI pipeline via Azure DevOps
- **Executed large-scale client data migrations** with validation and rollback strategies, ensuring data integrity and smooth production rollouts across all 7 environments.
- **Improved team delivery efficiency** by building internal tooling including automated DB change extraction for release notes, environment reporting scripts, and CI/CD pipeline improvements—reducing manual overhead for a 5-person team.
- **Consistently recognised for planning and communication contributions**, including surfacing edge cases, raising challenging questions during requirement discussions, and flagging potential issues before development began—reducing rework and improving delivery accuracy across sprint cycles.

Mobile Developer

Maliksi Creative Technologies Inc.

May 2021 - March 2023

Makati, PH

- **Developed and maintained 2 client-facing education mobile apps** using Flutter, delivering 100+ user stories and resolving 50+ bugs across the full development cycle—from UI implementation through to production release.
- **Owned the release pipeline for both apps**, managing build distribution to QA and stakeholders via Firebase App Distribution and Apple TestFlight, ensuring consistent and timely delivery.
- **Led the migration of a client's Flutter app from v1 to v2**, resolving breaking API changes and ensuring full feature parity post-migration with no regression in production.
- **Contributed to UI/UX design discussions** and collaborated with QA on cross-platform testing of mobile and web apps, improving design consistency and catching issues before release.
- **Assisted the back-end team in a database migration**, supporting data integrity validation and coordinating across teams to ensure a smooth cutover.

SKILLS & INTERESTS

Core Strengths: Attention to detail, Critical questioning, Identifying edge cases, Risk and issue anticipation, Analytical problem-solving, Strong communication in planning sessions

Frontend : React.js, TypeScript, HTML/CSS/JS, SCSS, Bootstrap, Figma, UI Libraries

Backend: .NET/C#, Java, Node.js, SQL Server

Frameworks: Frameworks: React, React Native, Spring Boot, Flutter, Laravel

Cloud & Devops: Azure, Azure DevOps, CI/CD Pipelines

Tools: Git, VS Code, Postman, SourceTree, GitHub Desktop, Jira, DBeaver

Interests: CrossFit, Travelling, Saxophone, Pickleball
